Freeview+ with built in Personal Video Recorder (PVR) and DVD player

Never seen before SD card storage

The use of an SD card rather than a hard drive means the retailer can choose what size of card to include with the TV. The consumer can then purchase further SD cards as they need them.

The SD card will also allow the user to:

- > make unlimited recordings
- > store their favourite programmes / movies
- > Play their programmes / movies on different TVs that have the same PVR SD card feature
- > Easily manage their recorded programmes / movies and create back ups of their favourites
